Firstly made a ubuntu vm named ECS-vm

After that clone the repo in the vm

Install docker

Add user to the docker group

Sudo usermod -aG docker $USER

Reboot the system

Install aws CLI

curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"

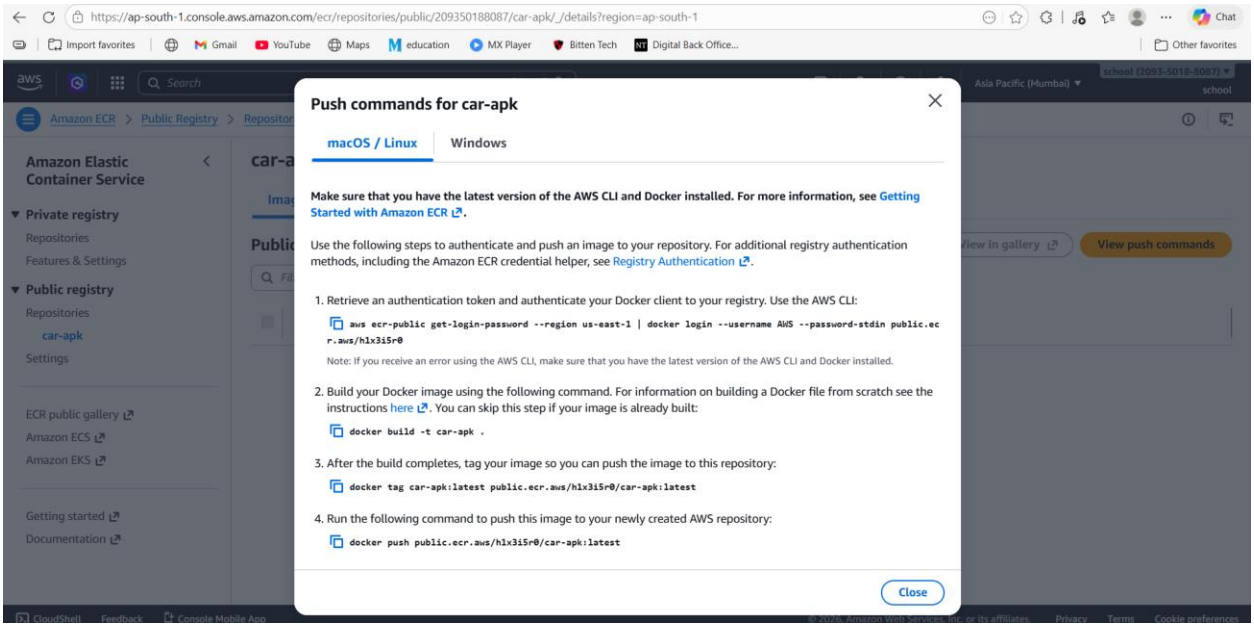
sudo apt install unzip

unzip awscliv2.zip

sudo ./aws/install

Now create the public AECR named the car-apk select Use linux and architicure

After successfully create click on view push commands



Now we will have to execute these commands in the ubuntu vm

Before that do aws configure and now they demand credientails

```
Last login: Thu Mar 26 12:14:24 2026 from 223.185.57.236
ubuntu@ip-10-0-1-128:~$ aws --version

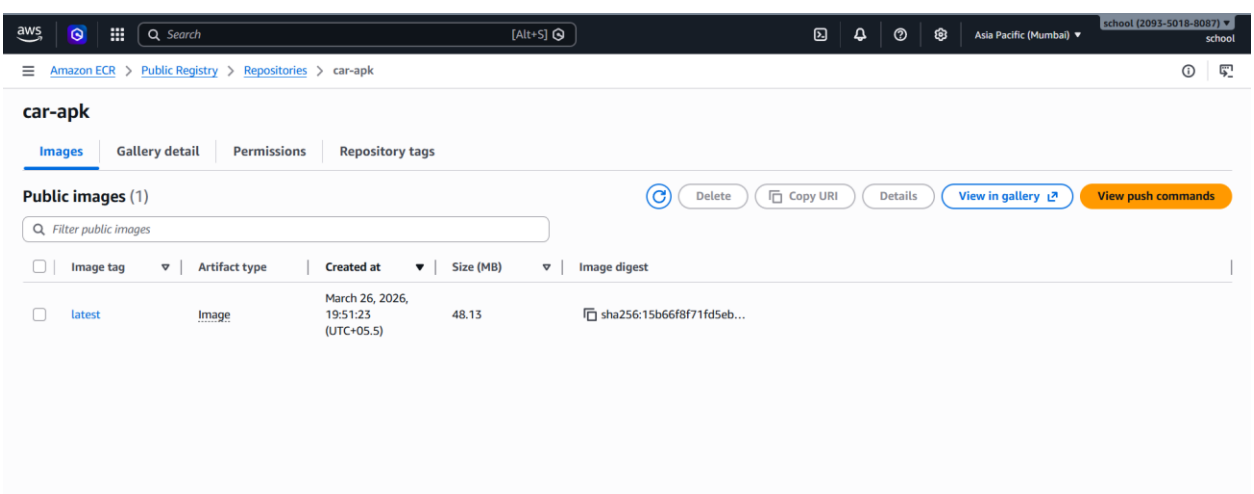
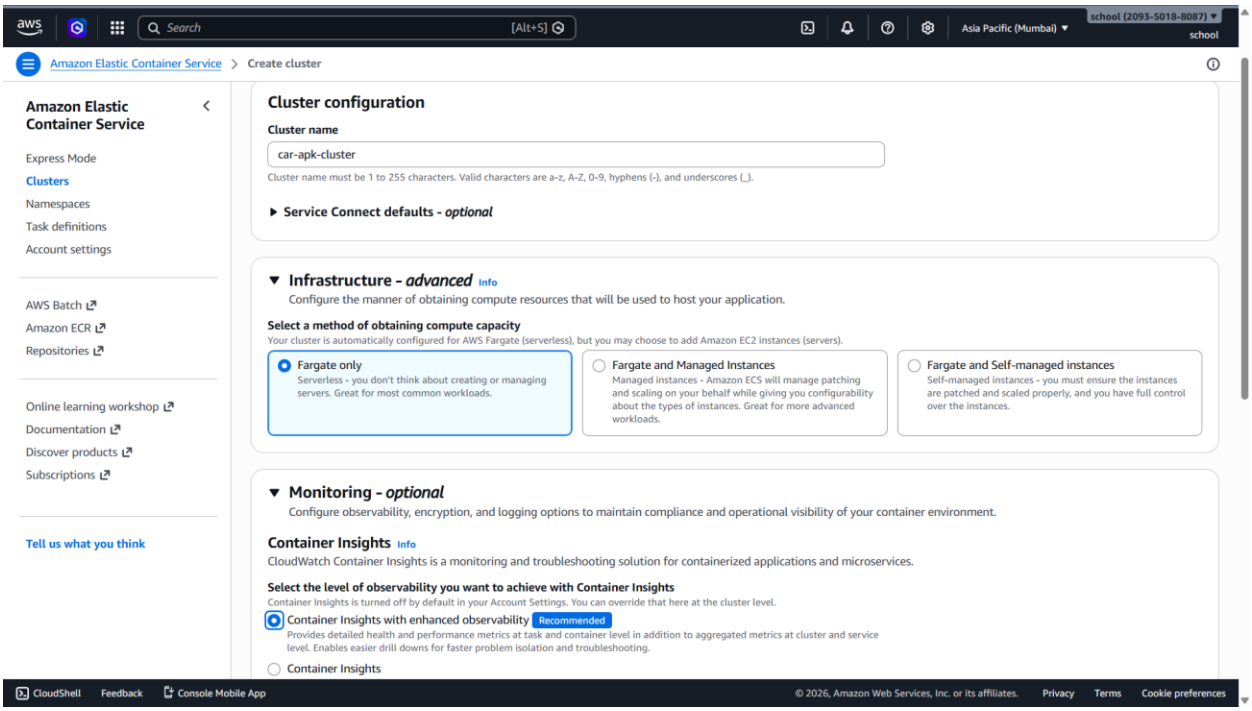
Image appears here in the ECR

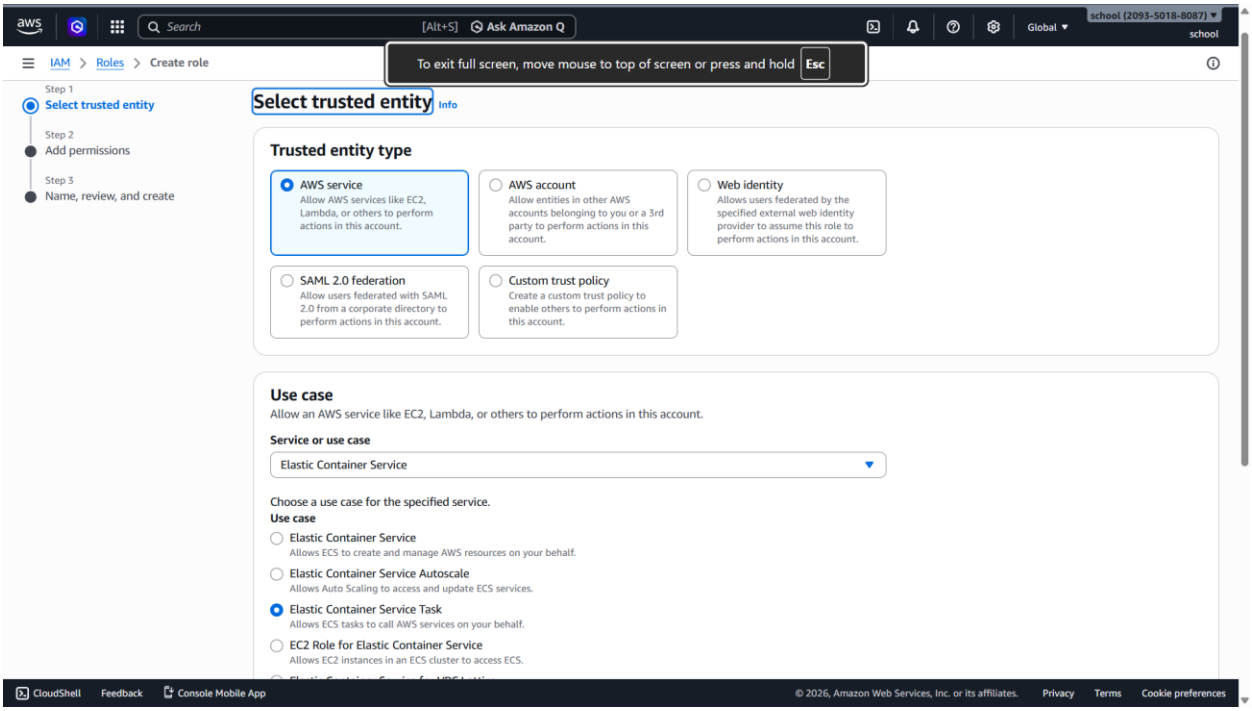


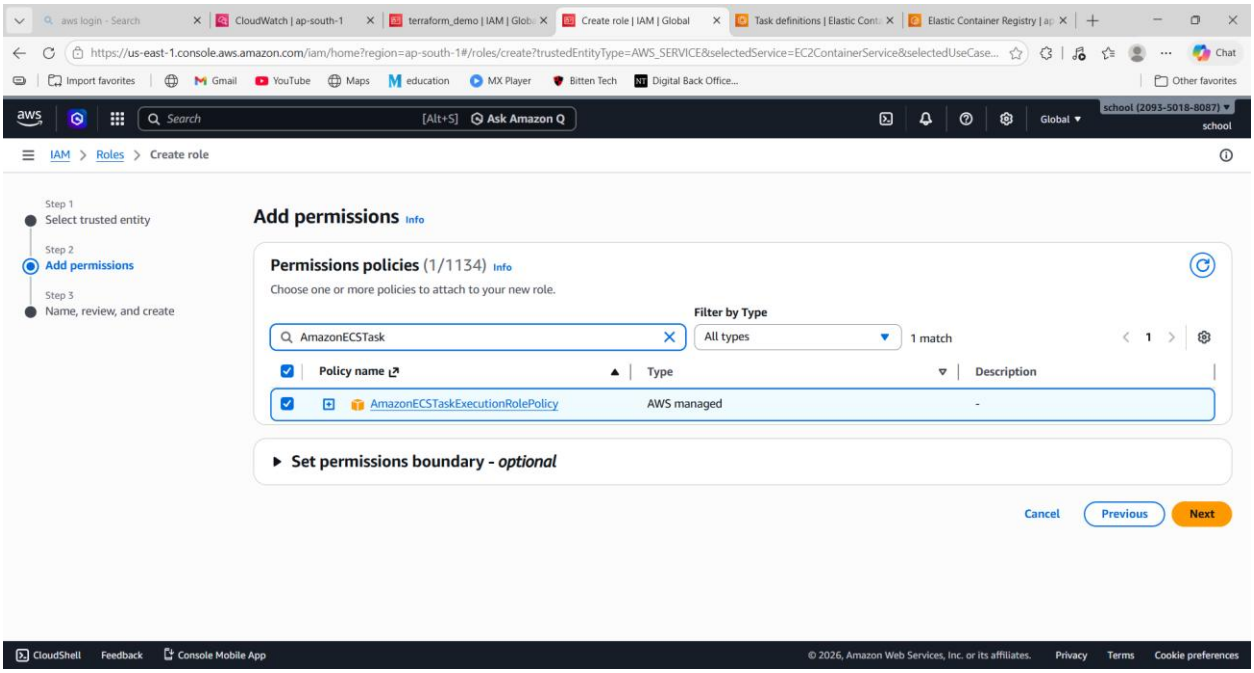


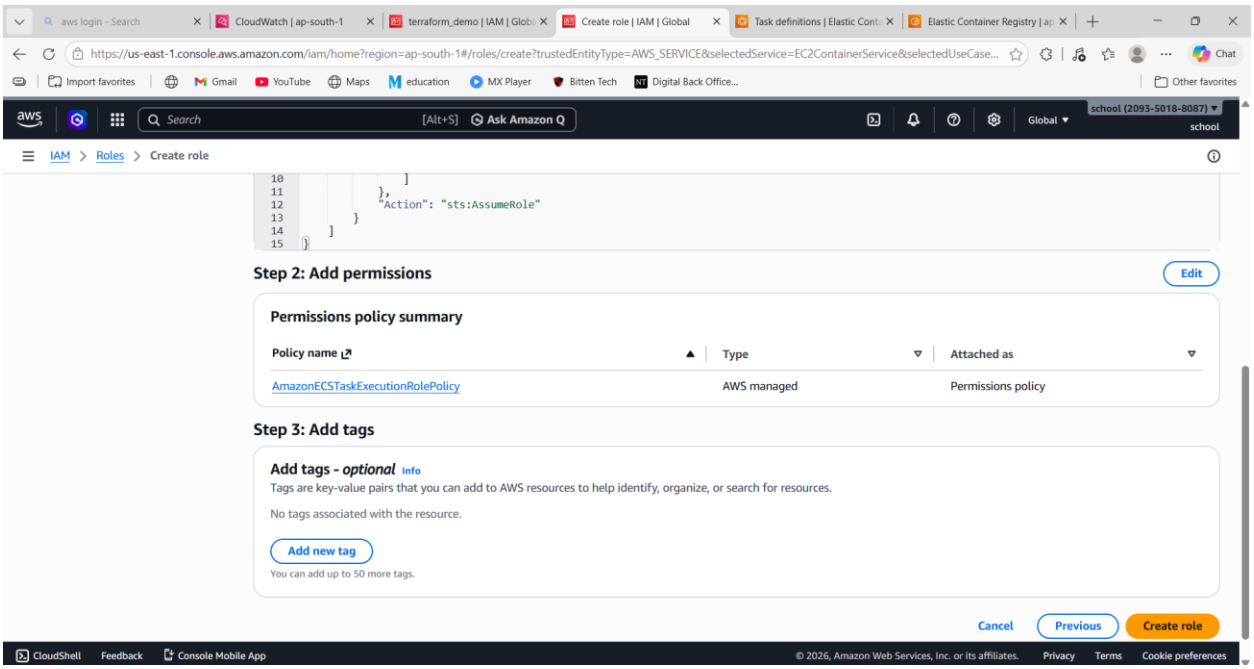
changes name to

carApkcluster later beause this is invalid name as in the image

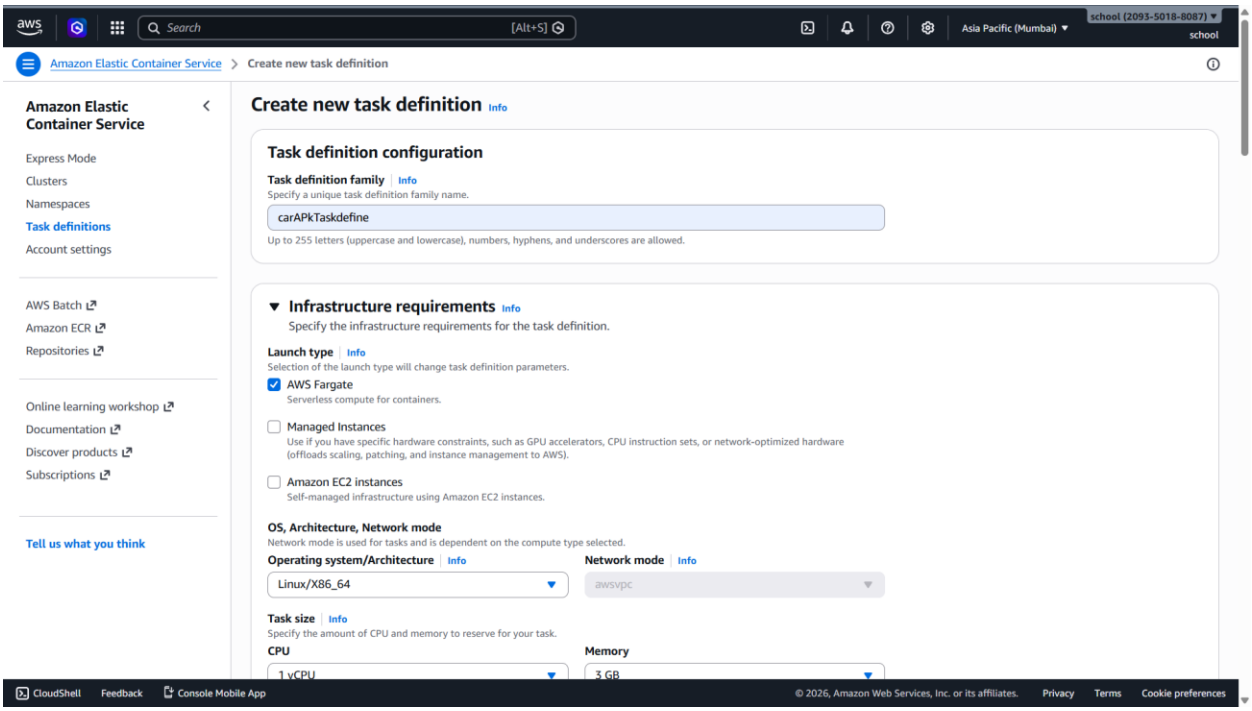
Create ECS task execution role



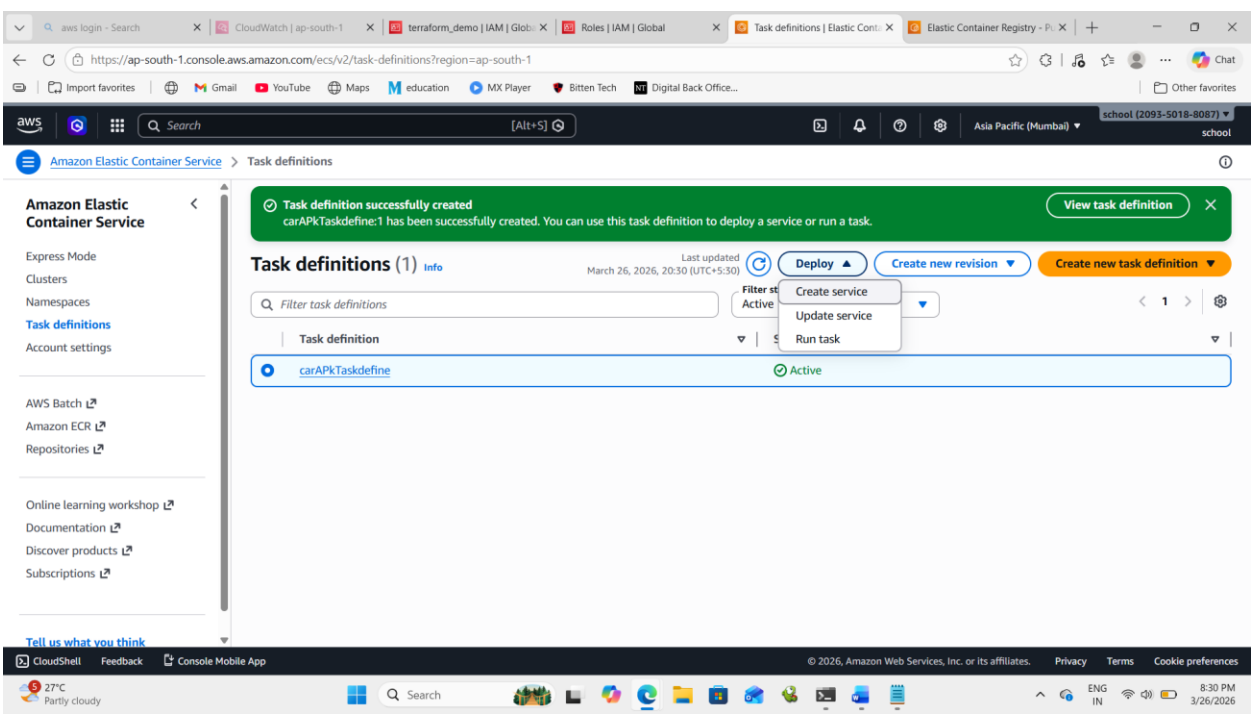




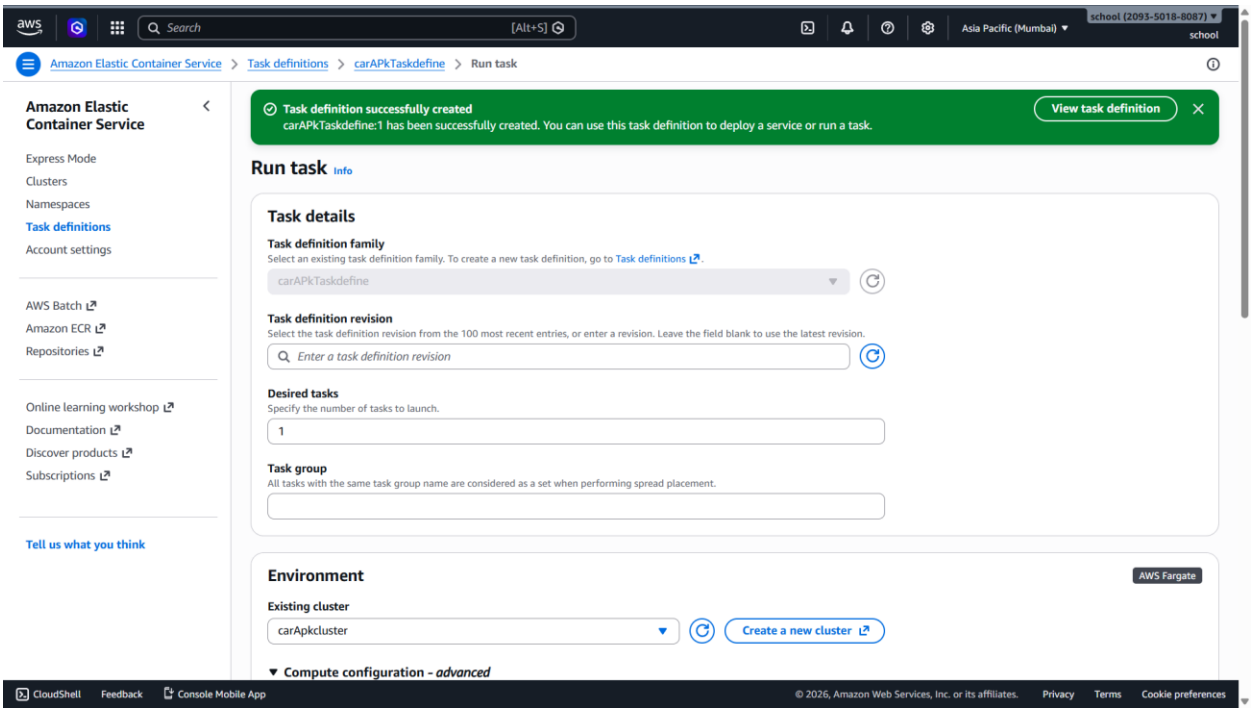
Copy the public url of the image from the ECR and paste here and do left configurations



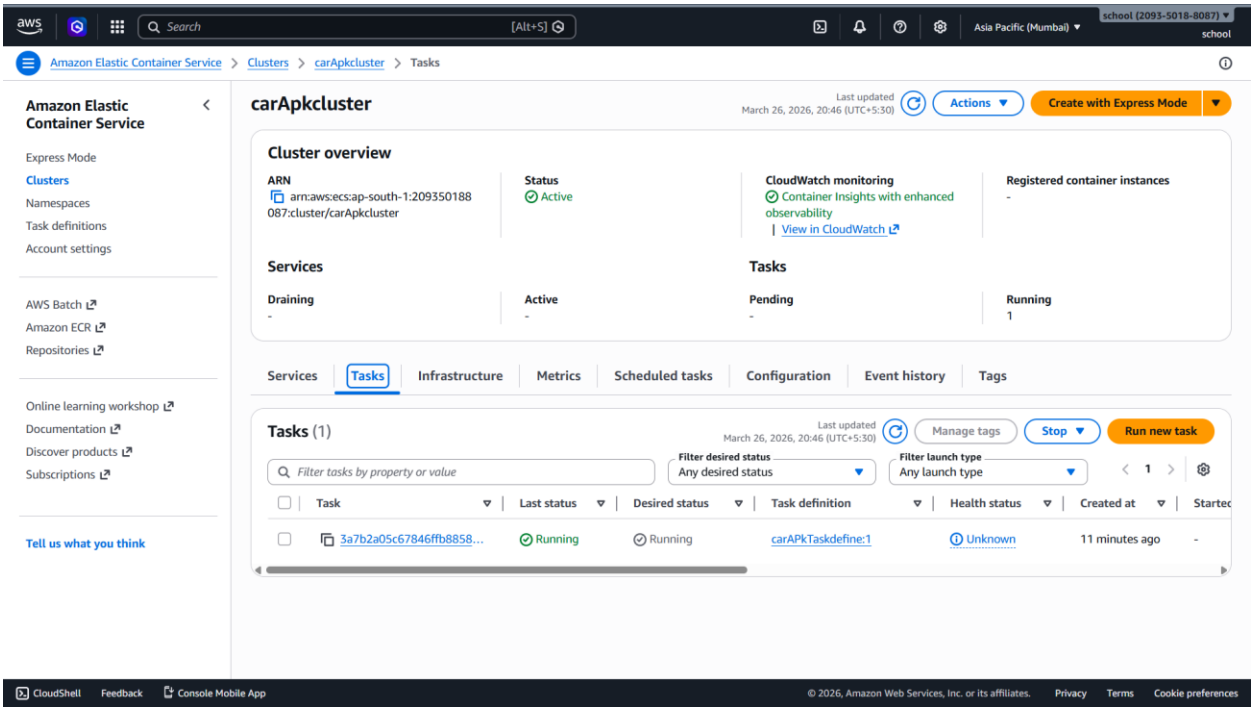
Now click on task defination and run task

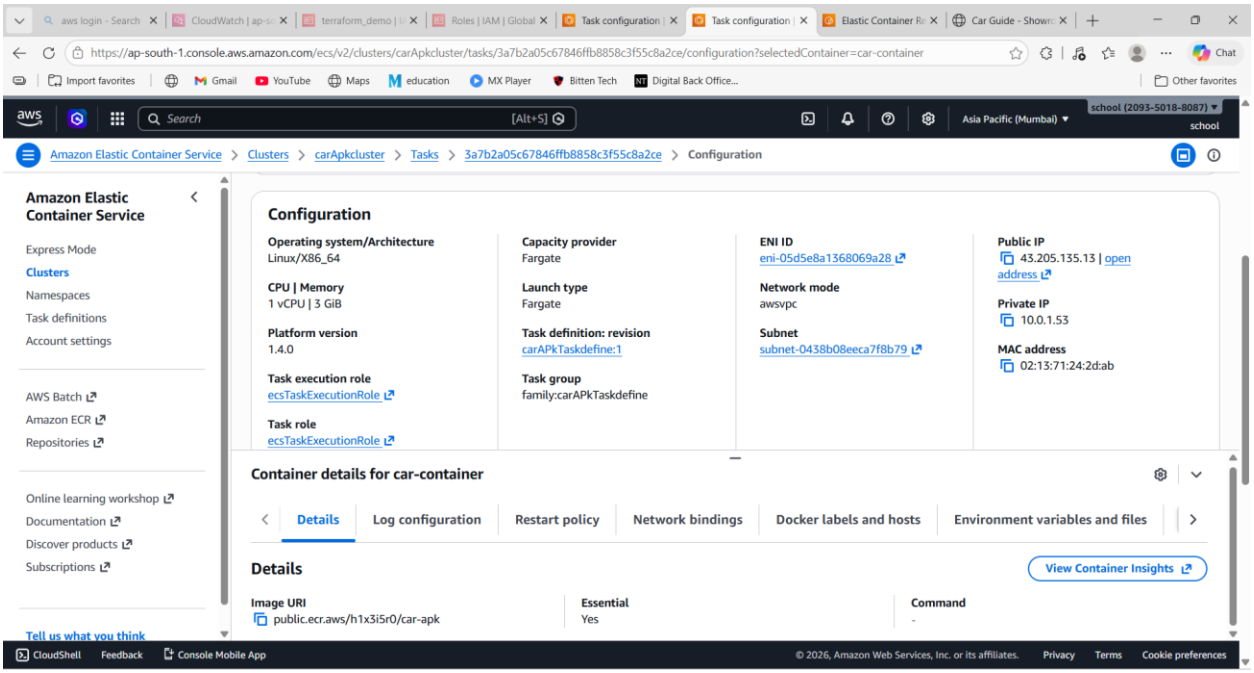


Now create the cluster



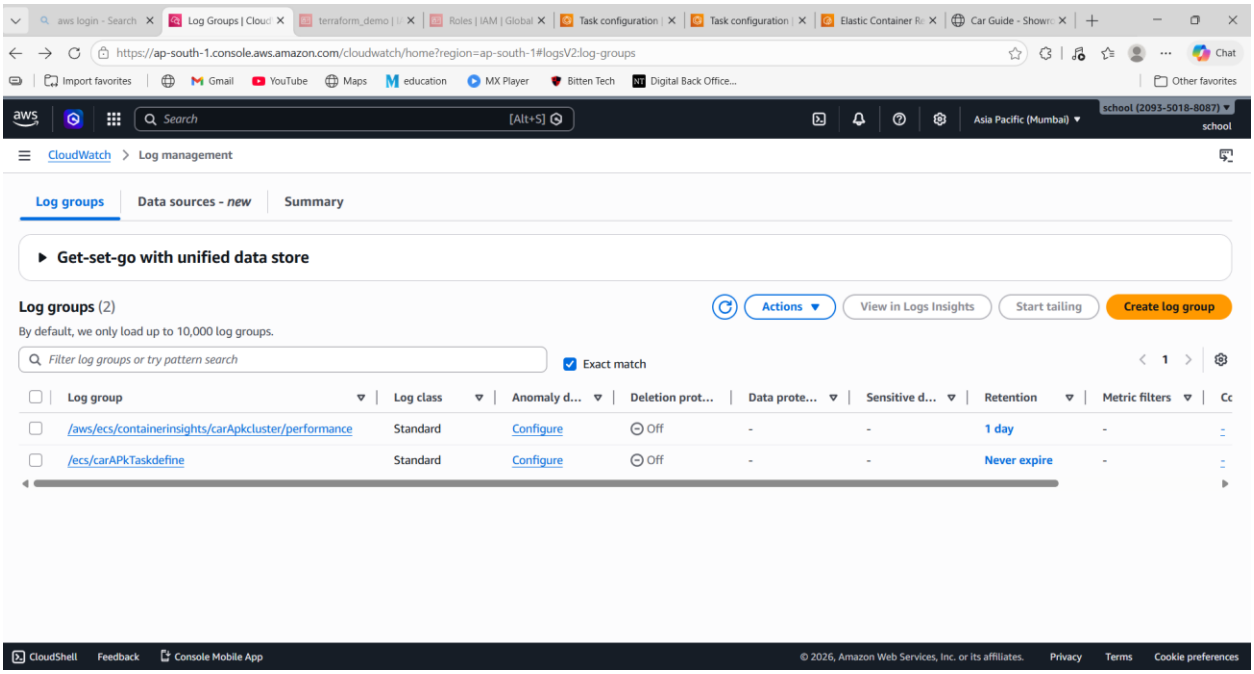
Go to the task click one task id and copy the ip address and run on the broswer

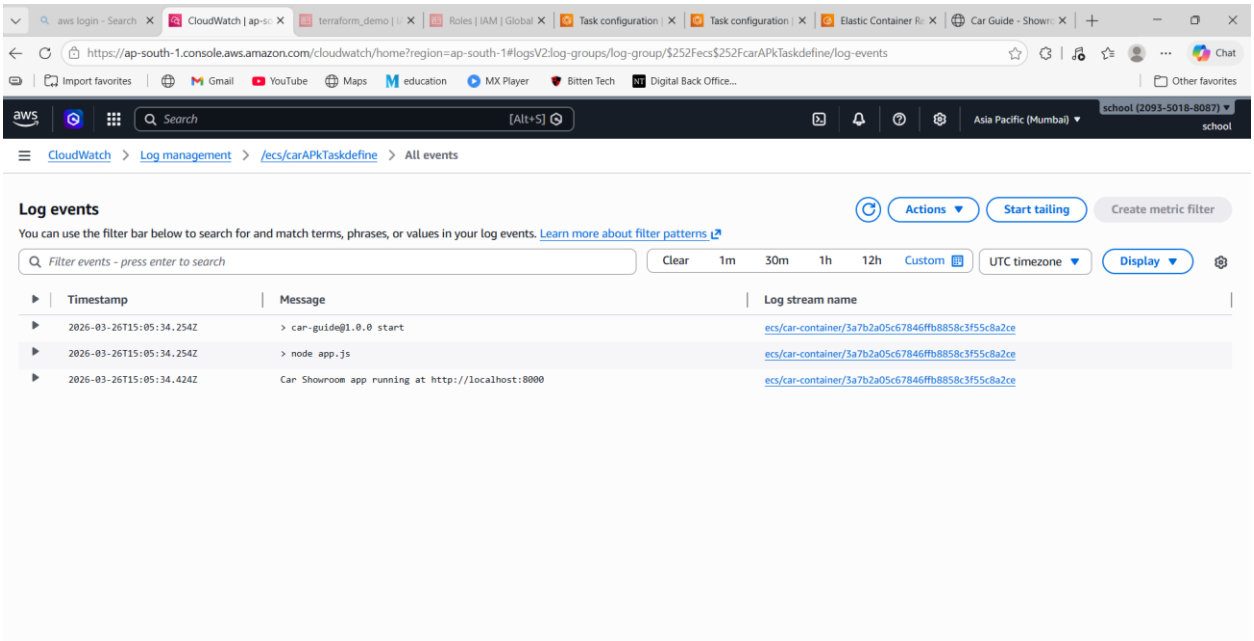




If apk is not working , click on ENI ID and then vnet and in security group inbound rules add 80000 port and allow connection from anywhere then save my website is live now

Go to log groups in aws cloudwatch here you can see your logs





https://ap-south-1.console.aws.amazon.com/cloudwatch/home?region=ap-south-1#logsV2:log-groups/log-group/$252Fecs$252FcarAPkTaskdefine/log-events
